DETAILED ACTION

Allowable Subject Matter

1. Claims 1-21 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The primary reason for allowance is the requirement that the top pole include a high moment material with a magnetic saturation greater than 1 Tesla. The prior art does suggest a contoured upper pole similar to the claimed invention (see U.S. Patent No. 5,734,533 to Nepela), but in the case of the prior art, the pole is formed comprising only low moment materials, such as permalloy (B_{sat} = about 0.8 Tesla). Although it is also known in the art to use a layer of high moment material in the upper pole (see U.S. Patent No. 5,606,478 to Chen et al.), the use of such materials tends to cause problems with magnetostriction and curved transitions. It is the examiner's opinion that there is insufficient motivation in the prior art to combine the contoured upper pole of the prior art (such as Nepela) with the high moment material (such as in Chen), and there is no suggestion in the prior art that the specific combination of the structures would provide any beneficial effects, such as improving the track density while significantly reducing the negative effects of using a high moment material.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
